

Kevin Brace

ML & Software Engineer

Kevin@WOMBO.ai | latentfidelity.dev | github.com/latentfidelity | x.com/latentfidelity | codepen.io/latentfidelity

SUMMARY

ML and software engineer building AI-powered products, data-intensive systems, and production web platforms used by 200M+ people. Experienced across generative image and video systems, real-time inference, distributed systems, product engineering, and customer-facing software. Strong self-directed builder with 20+ years of software development and a track record translating ambiguous problems into shipped systems.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, C++, PHP, SQL, HTML/CSS

AI / ML: PyTorch, diffusion models, real-time inference, LLM orchestration, OpenAI API, Gemini API, ComfyUI, NumPy, Pillow

Frontend: React, Next.js, Vite, Electron, Three.js, Tailwind CSS, GSAP, Framer Motion

Backend / Infrastructure: Node.js, Express, Docker, Kubernetes, AWS, GCP, PostgreSQL, SQLite, Redis, Linux, Git

Product: Technical prototyping, production QA, workflow design, Figma, Stripe

PROFESSIONAL EXPERIENCE

WOMBO Studios Inc - ML & Software Engineer

2022 - Present

Toronto / Remote

- Engineer AI-powered entertainment products serving 200M+ users across iOS, Android, and Web.
- Build generative image and video systems, real-time inference infrastructure, and production ML pipelines for Dream, W.AI, and multiple shipped products.
- Translate prototype ML workflows into user-facing features with reliability, performance, and operational concerns.
- Contribute across product engineering and ML infrastructure, bridging model capabilities, frontend workflows, backend services, and production user experience.

Independent - Software Engineer

2018 - 2020

Contract and Freelance

- Built production full-stack systems across web and mobile for startups in fintech, social media, and developer tools.
- Owned product-facing software across frontend, backend, data, deployment, and release concerns.

Self-directed - Web Developer

2003 - 2018

Central Valley, California

- Built web, systems, game, open source, and early machine learning projects while developing broad self-directed engineering experience.

SELECTED PROJECTS

W.AI - Rust, TypeScript, distributed systems

- Contributed to a global compute substrate for decentralized AI infrastructure.

WOMBO Dream - Python, diffusion models, GCP

- Helped build AI video and art products connected to a 200M+ user audience.

PAR - Node.js, Docker, MCP

- Built AI memory infrastructure for persistent agent workflows.

gif2ascii - React, TypeScript, Vite, Node.js

- Built a media-processing tool with GIF/image decoding, real-time preview, export pipelines, and CLI support.
